EDUCATION	**Massachusetts Institute of Technology**	
	M. Eng. in Computer Science – 5.0/5.0	May 2020
	B.S. in Physics and Computer Science – 4.7/5.0	June 2019

WORK

Kensho – *Part-Time Software Engineer* — Spring '19
- Laid the foundation for estimating database query costs under Kensho's GraphQL compiler using database statistics

Project Invent – *Winter Extern* — Jan '19
- Worked at an early-stage non-profit to bring invention education to teachers and students across the country
- Contributed to program design, strategy meetings, and fundraising development

Indeed – *Software Engineer Intern* — Summer '16
- Created a predictive data-driven decision-making system to increase SEO acquisition for job result pages with Java, Hadoop, Pig Latin, and Git

RESEARCH

Generative Models for Stellar Spectra – *Researcher, MIT* — Mar '19 – May '20
- Implemented and experimented with variational autoencoders and flow-based networks as stellar spectra models for my Master's thesis

Bayesian Modeling of Supernovae – *Researcher, Imperial College London* — Summer '18
- Developed and tested a hierarchical Bayesian model for selection effects in supernovae lightcurves to better infer parameters about our universe

NuSTAR X-Ray Analysis of the Galactic Center – *Researcher, MIT* — Sep '17 – Jun '18
- Analyzed high energy spectra near the Galactic Center to characterize and constrain dark matter candidates with Python, Sherpa, and HEAsoft software

MIT Office of Open Learning – *Data Science Researcher* — Jun '17 – Jan '18
- Prepared a student feedback tool for instructors to experiment on how various feedback impacts student behavior with Flask and Google BigQuery

Mathworks at Texas State University – *Research Assistant* — Summer '14
- Characterized negativity in hypergraph structure to enhance our understanding of deficiencies in neural / social / magnetic networks

PROJECTS

ProSet proset.evantey.me — Summer '20
- Created a websocket-based multiplayer version of the card game ProSet with Mongo, Express, React, and Node

Educational Telescope with VR — Spring '18
- Building a real 10" f/5 Dobsonian telescope with additional sensors and a screen to emulate telescope usage for use on cloudy nights

Consensus consensus.evantey.me — Spring '16
- Used the design process to lead a team of six in creating a live classroom tool that reduces confusion between students and teachers
- Interviewed teachers, then prototyped and tested several features before developing a simple webapp to track users, questions, and confusion in the classroom

Align — Spring '16
- Constructed a device to detect bad posture and give haptic feedback with flex sensors and an Arduino in a team of six

Concrete Convolutional Neural Network Cryptosystem — Fall '16
- Replicated and extended Google Brain's paper *Learning to Protect Communications with Adversarial Neural Cryptography* with a team of three

3D Scanner Fall '16
- Built a 3D laser scanner to generate and display a point cloud from an object using an FPGA
- Rendered and allowed interaction with the point cloud through VGA output

LASA UIL Study Site Fall '14
- Developed a quizzing website to help novice CS students learn general programming principles
- Parsed PDFs of computer science tests to a question database using MongoDB, Javascript, NodeJS, Jade, and JQuery

TEACHING

MIT Undergraduate Mathematics for Computer Science – *Graduate TA* Sep '19 – May '20
- Ran weekly office hours and interactive recitations on discrete mathematics

MIT Spokes – *Organizer & Participant* Summer '19
- Biked across the country and taught STEM workshops at local schools / libraries with seven other MIT students

Educational Studies Program – *Admin* Feb '16 – Jun '19
- Organized programs for middle/high schoolers to take classes from MIT students
- Directed Splash (over 2000 students, 500 teachers, 40 admins)
- Taught classes on astronomy, statistical mechanics, algorithms, and more

Undergraduate Math Department – *Peer Tutor* Feb '16 – Dec '17
- Tutored MIT undergraduates in single- and multi-variable calculus, differential equations, and linear algebra for 4 hours a week

MIT Undergraduate Electricity & Magnetism – *Undergraduate TA* Spring '17
- Coached MIT undergraduates through physics problems for 5 hours a week

Mathworks at Texas State University – *Honors Summer Math Camp Counselor* Summer '15
- Counseled a group of four high school students in Combinatorics and Real Analysis
- Ran additional review sessions and assisted a Mathematica class
- Worked with 15 other counselors to maintain a nurturing camp environment

AP Computer Science – *TA* Aug '13 – May '14
- Assisted AP Computer Science students during class by creating worksheets and helping students learn how to debug programs

Scratch Camp – *Cofounder* Spring '13
- Designed and ran a camp to stimulate computer science interest in Pearce Middle School students

AWARDS

Larry G. Benedict Leadership Award – *MIT Awards Convocation Awardee* Spring '19
- Recognized for showing dedication for empowering my fellow students to develop as leaders

8th Int'l Olympiad on Astronomy and Astrophysics – *Honorable Mention* Aug '14
- Represented the USA in theory, observation, and data analysis exams in Romania

SKILLS

Hard: Python, Jupyter, Numpy, Pandas, Tensorflow, Git, Javascript, Node, Java, Linux
Soft: Leadership, Data Science, Design Thinking, Rapid Prototyping
Interests: Stargazing, Education, Soccer, Food
